1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:
 - I. Claims 1-9 and 18-24, drawn to a method of modulating the immune response of a mammal, classified in Class 424, subclass 184.1 +.
 - II. Claims 10-17, drawn to a composition comprising an antigen and an FcRN binding partner, classified in Class 530, subclass 387.3.
2. Inventions I and II and Inventions II and III are related as product and method of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (M.P.E.P. § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process such as immunopurification procedures or detection assays for FcRN molecules.
3. Because these inventions are distinct for the reasons given above and because these inventions have acquired a separate status in the art as evidenced by their separated classification, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.
5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application.
